

zkBTC Brandbook

1 Master status

The only logo master is the approved PNG (1774×887).

SHA-256 a4cf36c991f6458ef43f94077ff0c4d844855166df2a221715f79405cf3d5131

Canonical lockup master is a byte-for-byte copy. Byte diff 0. Pixel diff 0.

Presentation canvas is pure black. The orange architectural Bitcoin-B/Z has two top and two bottom Bitcoin strokes and subtle internal tonal variation. That variation is binding.

Do not impose a flat-color or no-gradient rule on the master.

Transparent, light-use, and mono files are derived conveniences, not masters.

SVG and PDF are raster-backed containers, not editable vector art.

Transparent recomposition over black: measured max channel delta = 0 (gate ≤ 1).

No construction coordinates are invented. Geometry comes only from source pixels.

zkBTC Brandbook

2 Logo variants

01 — Lockups (actual exports)

Dark bg

Light bg (warm paper)

Transparent on checker

Transparent light-use on paper

Mono black

Mono white

Mono orange

Transparent on dark

02 — Symbol variants (crop 220,180,610,715)

Architectural B/Z retains two top and two bottom Bitcoin strokes. Crop excludes zkBTC wordmark.

4 Color

Orange anchor
#F7931A

Near-black
#0A0A0A

White
#FFFFFF

Warm paper
#F7F3EA

Warm gray
#D9D2C3

Master canvas
#000000

Support UI uses the palette above.

The master itself is not a flat-color lockup: orange regions contain source tonal variation.

Light-use BTC ($x \geq 980$): source-derived alpha ≥ 32 becomes near-black RGB with that alpha kept; alpha < 32 is zeroed as cleanup of subvisible black-canvas noise, not new geometry.

Wordmark: orange zk, white BTC on the dark master.

zkBTC Brandbook

5 Clear space and minimum size

03 — Sizes and clear space

Clear space: keep at least 10% of lockup height empty on every side. Do not invent construction coordinates.

320×160 export — native

640×320 export — native

1280×640 export — scaled for sheet

32px symbol

64px symbol

128px symbol

256px symbol

zkBTC Brandbook

6 Formats

PNG: lossless raster for lockups, symbols, favicons, social, previews.

WebP: lossless companions of lockup and symbol PNGs (deterministic lossless encoding).

SVG: raster-backed container with embedded data:image/png;base64, and no external href.

PDF logo files: high-resolution raster art in a PDF container. Not path outlines.

ICO: 16, 32, 48, 64, 128, 256. Favicon PNG 16/32. Apple 180. Android 192/512.

All SVG/PDF metadata/title: Raster-backed container; approved PNG master defines the artwork.

PDF writers use invariant metadata (fixed title/author/subject; no wall-clock dates).

asset-manifest.json lists SHA-256 for every generated/distributed file. No timestamps.

Kind labels: raster-master | raster-derived | raster-backed-container.

zkBTC Brandbook

7 Correct and incorrect use

04 — Correct and incorrect use

CORRECT — approved master pixels on black

PROHIBITED SAMPLE — rotated (do not use)

PROHIBITED SAMPLE — stretched (do not use)

PROHIBITED SAMPLE — recolored (do not use)

Do not outline, add shadows, rearrange zk/BTC, crop the strokes, or reconstruct the B/Z in vectors.

Do not treat SVG/PDF as editable path art. They are raster-backed containers only.

zkBTC Brandbook

8 Technical verification

Verifier asserts source name, SHA-256, and 1774×887.

No package filename contains draft or reference.

Lockup master PNG is byte-identical and pixel-identical to the approved source.

Transparent dark-use recomposed on black: max channel delta ≤ 1 .

Alpha is real (not a fake opaque rectangle).

Light-use BTC cleanup uses alpha cutoff 32; $x < 980$ is unchanged from dark-use.

Symbol crop ends before $x=610$ and cannot include wordmark pixels.

SVGs embed data:image/png;base64, and contain no external URL.

Manifest hashes match files on disk.

Brandbook PDF has at least 6 pages (this document).

Honest limitation: without a true vector master, SVG/PDF are raster-backed containers.
